SUMMARY

Java Backend Developer with hands-on experience designing and developing secure, database-driven applications using Java, Spring Boot, Spring Security, REST APIs, JPA/Hibernate, MySQL, and PostgreSQL. Experienced in building backend systems across e-commerce, bookstore, college ERP, and travel domains, with practical expertise in authentication, role-based authorization, CRUD operations, database integration, and payment workflows. Developed backend functionality for the HimYatraa travel package booking platform, including RESTful APIs, booking workflows, database integration, authentication, and deployment. Strong foundation in Data Structures & Algorithms, Object-Oriented Programming, and backend application development, with a focus on writing scalable, maintainable, and production-ready code.

SKILLS

Languages: Java, SQL, HTML, CSS, JavaScript

Backend: Spring Boot, Spring Framework, Spring MVC, Spring Security, RESTful APIs, JWT, JPA, Hibernate

Database: MySQL, PostgreSQL

Tools: Git, GitHub, Maven, Docker, Postman, Swagger

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems

EDUCATION

B. Tech (Computer Science and Engineering)

IIMT College of Engineering
(Affiliated with Dr. A.P.J. Abdul Kalam Technical University)

2023 - Present
Greater Noida, Uttar Pradesh

Intermediate

Bihar School Examination Board

Mar 2023
Gaya, Bihar

Matriculation

Central Board Of Secondary Education

Aug 2021
Gaya, Bihar

PROFESSIONAL EXPERIENCE

Backend Developer

June 2026 - August 2026

Travel Package Booking Platform (HimYatraa) [Live ↗](#)

- Developed and maintained backend services for a travel package booking platform using Java and Spring Boot.
- Designed and implemented 20+ RESTful APIs covering travel package management, booking workflows, user operations, and administrative functionality.
- Implemented authentication and role-based authorization using Spring Security and JWT.
- Designed PostgreSQL database schemas and implemented data persistence using Spring Data JPA and Hibernate.
- Integrated Cloudinary for secure image and media management.
- Implemented a payment verification workflow based on UTR submission and administrative verification.
- Containerized and deployed backend services using Docker, with deployment on Render and PostgreSQL hosted through Neon.
- Integrated backend APIs with the frontend to support end-to-end travel package and booking workflows.

PROJECTS

- **Multi-Vendor E-Commerce Backend Application**

[GitHub ↗](#)

Tech Stack: Java, Spring Boot, PostgreSQL, Spring Security, JWT, Docker, Git, GitHub, Razorpay

Built a scalable multi-vendor e-commerce backend using Java and Spring Boot, supporting user authentication, product management, cart, order processing, and Razorpay payments. Implemented JWT-based authentication and role-based authorization using Spring Security, with PostgreSQL for database persistence and Docker for containerization.

- **Online Bookstore Management Application**

[GitHub ↗](#)

Tech Stack: Java, Spring Boot, Spring Security, JWT, JPA, MySQL, REST API, Docker

Developed a secure online bookstore backend using Java and Spring Boot, implementing role-based authentication, book and category management, cart, order processing, and payment functionality. Built RESTful APIs with Spring Security, JWT, JPA/Hibernate, and MySQL for secure and reliable backend operations.

- **College ERP Backend System**

[GitHub ↗](#)

Tech Stack: Java, Spring Boot, Spring Security, JWT, JPA, MySQL, REST API

Developed a secure College ERP backend using Java and Spring Boot to manage student records, attendance, events, and user roles. Implemented structured RESTful APIs, JWT authentication, and role-based authorization using Spring Security, with JPA/Hibernate and MySQL for database integration.

RESEARCH PUBLICATION

Beyond the Myth of Linear Sorting : A Deep Dive into the $\Omega(n \log n)$ Constraint

December 2025

International Journal of Research Publication and Reviews (IJRPR)

Author: Ronit Kumar Verma

Authored a research paper analyzing the theoretical $\Omega(n \log n)$ lower bound for comparison-based sorting using the decision-tree model. The study examines why universal linear-time sorting is impossible and analyzes how Counting Sort, Radix Sort, and Bucket Sort can achieve linear-time performance under specific input constraints.
